Portfolio metrics are calculated weighted averages unless otherwise stated. Yield calculated as the portfolio's weighted average of individual stock dividend yields and bond yields to maturity, sourced from Capital IQ. Interest on cash balance not included. This is not to be interpreted as anticipated income distribution from the Fund. Please refer to the Fund's income distribution policy for more information.

1, 2 and 5 year beta statistics are provided as a weighted portfolio average of individual stock betas, calculated using 52 weekly returns, 104 weekly returns and 60 monthly returns respectively. GRR equity beta adjusted for net exposure. Capital IQ's betas are levered, unadjusted and derived from a least squares regression analysis using different benchmark indices: S&P 500 for US stocks, the S&P/TSX index for Canadian Stocks, and MSCI EAFE (Developed Markets) and MSCI EM for all other international stocks. Absolute volatility is the standard deviation of daily returns over a trailing 12-month basis of the Fund's portfolio. Exposures data excludes cash and fixed income positions, without rebalancing.
